SEA 04M32 Responsibilities

2M MTR Equipment Outfitting (O/I Level)

- 292 Ships and Shore Commands
- 21 Submarines (FY 01-03 planned)
- 7 CNET Training Commands (3 Courses)
- 10 FTSCs 2M MTR Inspector Sites
- New Equipment Evaluation/Selection
- 2M MTR Equipment ILS
- 2M Piece Part APLs (41 Ship Class & 20 Shore)

New Ship, System PM, SYSCOM, FMS and other Services/USCG Interface

2M MTR Program Processes

Gold Disk Development/Distribution

2M Certification/ Site Review Support

Why have 2M MTR trained technicians at O/I Level ?

System level technicians not trained to repair below Circuit Card Assembly or Electronic Module level.

Systems not spared with 100% CCA/EM and off ship supply delays cause excessive system downtime.

Afloat/ashore Navy & DLA Supply Inventories reduced.

Post Cold War transition resulted in DOD organic and private industry maintenance/supply issues; (DMS, Depot infrastructure reduction, alternate support processes, reduced funding).

2M MTR Capabilities improve Readiness, reduce ship/system life cycle costs and enhance Sailor Q of L.

Program Background & Evolution

NAVMAT chartered 2M Repair Programs for HW SYSCOMs in 1975 to standardize effective soldering processes, tools and training.

NAVSEA assumed 2M Program responsibilities for SPAWAR in 1986.

NAVSEA Program expanded to include test/diagnostics capabilities and 2M Piece parts in 1980s (2M ATE Program evolved to 2M MTR in 1991)

NAVSEA assumed lead Navy SYSCOM role for 2M Program in 1993.

“Gold Disk” capability introduced in 1989 and expanded to all O level from 1994-99.

RMIB affirmed 2M MTR O/I Level Requirements in 1998 and 2000.
JFMM and NAVSUP P485 provide policy, procedures and responsibilities.

Gold Disk Selection & Development

Since 1995, the selection process for NAVSEA Gold Disk development has been based on an annual **Gold Disk Candidate List**.

Candidate List includes NAVICP-M and DLA Columbus cog CCA/EMs with ROI potential of 3 years or less.

Candidate List is ranked by (Net cost x annual demand) with additional Alpha-numeric sorts by NIIN and Mfg part #.
CASREP data is added to Candidate Lists.

NAVICP-M and Fleet (TYCOMs) Prioritize Gold Disk candidates.
NUWCDET Norfolk coordinates Navy Gold Disk development to prevent redundant development. **400** Gold Disks developed annually.
Navy techs develop approximately **8%** of Gold Disks. Gold Disk backlog of over 7,500 candidates with good potential ROI.

Gold Disk Production

FY01 Totals; 18 Aug 2001

Benefits of 2M MTR Utilization

From 1 Jan 1998 to 30 June 2001, Navy commands outfitted by NAVSEA 04M32 reported 32,673 2M repairs completed which resulted in 2,570 CASREPS averted/corrected and \$101M in OPTAR cost avoidance.

Results in reduced requirements for shipboard and shore spare CCA/EMs.

Promotes sailor “Quality of Life” by allowing them to be self sufficient.

Also 2M MTR training used as a reenlistment incentive and CNO Monthly Gold Disk Award provides \$500 and LOC signed by a flag officer.

Module Test and Repair capabilities onboard ships can reduce system level tech assist visits.

Gold Disks can reduce costs for full diagnostics ATE Test Program Sets.

Requirements for Successful Utilization of 2M MTR Capabilities

Command and higher level attention and compliance with JFMM ,
Volume IV, Part I, Chapter 11 including Quarterly MTRTS Reports.

Trained Personnel with NEC 1591 and Current Certification

Work center properly outfitted with 2M MTR Equipment,tools,
accessories and 2M piece parts

Effective coordination between Supply and Maintenance personnel to
promote screening and repair attempts when feasible for all failed
circuit cards and electronic modules.
